## (54) MONITORING CONTROL SYSTEM

## (57)Abstract:

PROBLEM TO BE SOLVED: To provide a monitoring control system capable of easily confirming test operation of a sensor device and facility equipment without using an exclusive inspection device during the operation of the system.

SOLUTION: This monitoring control system performs monitoring control of terminal units 3 by a central monitoring device 1 by dispersing and installing the terminal units 3 in an object 5 to be monitored and controlled such as the sensor device and facility equipment. A switching means 4 switching setting of an operation mode operating the terminal units as at least a test condition is provided in the terminal units 3 as shown in Fig. 1, and the central monitoring device 1 excludes processing for interlocking the terminal units 3 with the other object 5' to be monitored and controlled when detecting that a setting condition of the operation mode by the switching means 4 is a test operation mode.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of

rejection]

[Kind of final disposal of application other than  
the examiner's decision of rejection or  
application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's  
decision of rejection]

[Date of requesting appeal against examiner's  
decision of rejection]
